CETONI SYSTEM
Hardware Manual – General Part

ORIGINAL INSTRUCTIONS 1.01 – MAY 2020
The information and data contained in this document are subject to change without notice. CETONI GmbH is constantly striving to develop all its products. This means that there may be changes in form, equipment and technology. Claims can therefore not be made on the basis of information, illustration or descriptions in these instructions. The description for the product specification in this manual does not constitute an integral part of the contract.

If you control the products with software from CETONI GmbH, you agree to the applicable license agreement, which can be read in the corresponding software manual. This and all other current product manuals can be found at https://www.cetoni.de/en/downloads/manuals.

CETONI GmbH grants its customers the right to reproduce this manual for the purpose of providing technical information to potential users of CETONI products. Extracts of these documents may only be reproduced or transmitted with a precise reference to the authorship of CETONI GmbH, irrespective of the manner in which they are reproduced or transmitted, either electronically or mechanically. Any duplication or use of excerpts for other purposes requires the written permission of CETONI GmbH.

We are always open to comments, corrections and requests. Please send them to info@cetoni.de.

The general terms and conditions of CETONI GmbH shall apply. Alternative agreements must be in written form.

2 Introduction

2.1 Foreword

Thank you for choosing a CETONI product. With this user manual we would like to support you in handling the CETONI products and devices. If you have any further questions or suggestions, please do not hesitate to contact us directly.

The complete system may only be put into operation after thorough reading of this manual. We wish you much success in working with the CETONI system.

2.2 Symbols and Keywords Used

The following symbols are used in this manual and are designed to aid your navigation through this document:

**HINT.** Describes practical tips and useful information to facilitate the handling of the software.

**IMPORTANT.** Signifies important hints and other useful information that may not result in potentially dangerous or harmful situations.

**CAUTION.** Identifies a potentially harmful situation. Failure to avert this situation may result in damage to the product or anything in its proximity.

**ATTENTION.** Indicates a potentially dangerous situation. Failure to avert this situation may result in light or minor injuries or property damage.
2.3 Norms and Guidelines

CETONI GmbH declares under its sole responsibility, that all devices of the system comply with the health and safety requirements of the relevant European directives.

2.4 Application Purpose

2.4.1 General Description of the Device

The CETONI system is a modular system of different devices for performing various processes and applications in laboratories.

2.4.2 Intended Use

The devices of the CETONI system are intended for the use described in the corresponding device manuals.

2.4.3 Reasonably Foreseeable Faulty Application

A use for applications distinct from the intended purpose can lead to dangerous situations and is to be omitted.

CAUTION. The unit must not be used as a medical device or for medical purposes.

2.4.4 Safety Advice

The safety of the user and a failure-free operation of the devices are assured only if original parts are used. Only original accessories may be used. Warranty claims will not be accepted for damage due to the use of alien accessories or expendables.

The devices have been developed and constructed in such a way as to largely rule out hazards due to its intended use. Nevertheless, you must observe the following security measures in order to exclude any remaining hazards.

- CETONI GmbH points out the responsibilities of the operator for the operation of the devices. The laws and regulations of the place of installation must be observed while operating the
devices! To ensure a safe work routine, operators and users must assume responsibility for adhering to regulations.

- The devices must not be used as a medical device or for medical purposes.
- The CETONI system is designed and approved to work in fluidic systems, which fall within the scope of Article 4 Para. 3 of the Pressure Equipment Directive 2014/68/EU.

This means that the system may not exceed a maximum volume of 1 liter. With the use of fluids from Group 1 according to Article 13, Para. 1 of the Pressure Equipment Directive 2014/68/EU, the maximum allowable system pressure is 200 bar. For fluids from Group 2 it is 1000 bar. If different, product-specific values for the maximum pressure are given in the section "Technical Data", these values must be complied with. Regarding the maximum operating temperature, the specification from the section "Technical Data" must be observed.

CETONI GmbH is not liable for consequences that may arise if the user expands the system by peripheral devices, such that one of the values or both values are exceeded.

It is the user’s responsibility to become familiar with the mentioned Pressure Equipment Directive and to comply with the prevailing requirements.

- Before operating the unit, the user must at all times ensure the operational reliability and the adequate and orderly condition of the unit.
- The user must be familiar with the operation of the devices and the software.
- The devices and pipes must be checked for damage before operation. Damaged pipes and plug devices must be replaced immediately.
- Cables must be laid in a way that avoids any risk of stumbling.
- Any moving parts must not be touched whilst the devices are in operation. There is a risk of crushing!
- Any parts that may be hot or cold must not be touched whilst the devices are in operation. There is a risk of a burn or frostbite!
- It is not allowed to use the devices in an explosive atmosphere or with potentially explosive substances.
- Wear protective glasses if you are working with corrosive, hot or otherwise dangerous substances during assembly work on the device.
- Transportation, storage or operation of the devices below 0°C with water in the fluid passages may cause damage to the modules.
2.4.5 Measures for Safe Operation

2.4.5.1 ELECTROMAGNETIC EMISSIONS

The CETONI system is intended for use in any type of facility, connected directly to the public power supply network that supplies buildings used for domestic purposes.

2.4.5.2 ELECTROSTATIC DISCHARGE

Floors should be made of wood, concrete, or ceramic tiles. If the flooring is made of a synthetic material; the relative humidity must be at least 30%.

2.4.5.3 ELECTRIC DISTURBANCES

The quality of the supply voltage should be to the standard of a typical business or hospital environment.

2.4.5.4 MAGNETIC DISTURBANCES

Do not place power connector cables, even of other appliances, in close proximity of the devices and their cables. Mobile communication devices may not be used in closer proximity of the devices or their cables than the recommended safety distance!

2.4.6 Safety Devices on the System

The system can be switched off at any time in an emergency using the mains switch on the Base Module (toggle switch on the side of the housing); this will cause no damage to the unit.

2.4.7 Condition of the Devices

Irrespective of the faultless manufacture of the devices, damage can occur whilst the unit is in operation. With this in mind, always carry out a visual check of the components mentioned before use. Pay particular attention to crushed cables, damaged tubing, and deformed plugs. If you should notice any damage, please do not use the devices and inform CETONI GmbH without delay. CETONI will put your devices back to an operational condition at the earliest. Do not attempt to repair the devices yourself.
2.5  Warranty and Liability

The devices left our company in perfect condition. Only the manufacturer is permitted to open the devices. All guarantee and liability entitlements, particularly damage entitlements due to personal injuries, are void if the devices are opened by an unauthorised person.

The duration of the warranty is 1 year from the day of delivery. It is not extended or renewed due to work carried out under warranty.

CETONI GmbH considers itself responsible for the devices with regard to safety, reliability and function only if assembly, new settings, changes, extensions and repairs are carried out by CETONI GmbH or an authorised centre, and if the devices have been used in accordance with the instruction manual.

The CETONI system conforms to the basic safety regulation standards. Industrial property rights are reserved on the circuits, methods, names, software programs, and units.
3 Initial Start-up

3.1 Unpacking and setting up the system

Set up your individual CETONI devices, initially without plugging them together or connecting them to each other, on a flat, horizontal surface, e.g. table, base cabinets or equipment trolleys. You can set up the system both horizontally and vertically.

Make sure that the ventilation slots provided on some units are not covered so as not to impair the function of the units.

The example above shows a typical configuration of CETONI devices with the corresponding scope of delivery:

- 1 Base module BASE 120
- 2 2 low pressure syringe pumps neMESYS 290 N
- 3 Bus termination plug
- 4 2 glass syringes
- 5 Power supply cable
- 6 USB-cable
• 7 Interconnect cable
• 8 Windows PC (customer device - not part of the delivery scope)

CAUTION. Consider the reduced stability in the upright position and try to minimize the risk of overturning and place the devices at least 40cm from the edge of the table.

IMPORTANT. Make sure that the ventilation slots which are present on some devices do not get covered.
3.2 Installing software

For installation, simply start the setup file of the QmixElements software on the enclosed CD.

When installing the software for the first time, make sure to also install the corresponding device drivers.
3.3 Connecting the base module

Connect the USB port of the base module (USB type B) to a free USB port of your PC (USB type A). Connect the base module to a mains socket using the supplied power cable. The device can be operated with alternating voltages of 90 to 264 V and 47 to 63 Hz.

**CAUTION.** Risk of injury from damaged cables and plug devices. Inspect the unit and lines for damage before starting the unit! Never operate the unit with damaged lines and plugging devices! Only use cables from the scope of supply.

**CAUTION.** Danger of tripping over the power and connection cable. When laying cables, ensure that any risk of stumbling is avoided!

Turn on the device with the mains switch in order to bring it into an operational condition. The power switch should illuminate when the unit is turned on. If this is not the case, check that the power connector cable is correctly plugged into both the unit and mains power supply.
3.4 Creating a device configuration

(1) Please connect the base module to your PC as described in the previous section. Use the supplied USB cable and the power cable.

(2) Start the software and click on Create Configuration ① or select Device → Create Configuration ② from the main menu.
(3) Create a new device configuration setup like the physical device setup with the *Device Configurator* by drag & drop. Simply drag and drop the individual devices from the device list into the current configuration ❶ or add the devices by double-clicking on them. Please note, adding the base module to your configuration is not necessary, that's why you won't find it within the device list (except you own a *Starter Module* with integrated pump).

(4) Save this configuration by clicking on *Save* ❷ and continue by clicking on *Configure* ❸.

**IMPORTANT.** Please do not plug all modules of your setup together from the beginning as it needs to be a step by step procedure. The software carefully guides you through the configuration process of each single module on your screen.
3.5 Configuring single modules

After clicking on Configure, the Configuration Wizard guides you through the configuration of all modules. Simply follow the instructions on the screen ❶ to configure each module one by one.

(1) Connect the first device to the base module according to the instructions in the software. Only one device at a time may be connected to the base module for configuration. Make sure that the base module is switched off when connecting and disconnecting modules.

**HINT.** For an easier mechanical handling you can use the interconnect cable ❷ for creating connectivity between the base module and the device to be configured.

**IMPORTANT.** Make sure that the bus terminator plug ❸ is always plugged in before the system is switched on, otherwise data communication may be disturbed.

(2) After successful configuration, disconnect the device you have just configured from the base module

(3) Follow the instructions displayed on the screen as before.

(4) Repeat these steps for all other devices in this configuration.
**IMPORTANT.** During configuration, connect only one single module at a time to the base module to configure it in the software.

### 3.6 Assembling the complete system and connecting it to the software

1. After the successful software device configuration of all modules, you can connect the physical devices all together to one whole setup now. To do this, place the module that you want to connect next to your base module or your existing system so that the centering pins of the last module of the system are opposite the centering holes of the module to be connected. Plug the new module into the system. The centering pins are guided into the respective centering holes and the connectors are connected with a contact fit. Connect the D-Sub connectors together ensuring a secure contact. To ensure a proper contact between the modules, both modules must lie flat against each other. Avoid tilting the modules.

2. Plug the bus terminator plug into the socket of the last connected module of your system.
(3) Follow the instructions of the *Configuration Wizard* and restart the software. Then establish a connection between your configuration and the physical devices by clicking on the connector icon (see figure below) in the user interface.

![Software interface with connector icon highlighted](image)

(4) Now your CETONI system is ready for use and you can explore the functions of the software.

**IMPORTANT.** Always plug the Bus-terminating-plug into the socket of the last connected module. Otherwise disturbances to the data communication may occur.

**IMPORTANT.** The function of the devices was tested with water prior to the delivery. Despite thorough cleaning minimal residues may remain in the system. If you have a critical application, you should rinse your system before use.
IMPORTANT. Deactivate the standby / sleep mode of your PC to avoid malfunctions.

IMPORTANT. In addition to this manual, please read the following manuals carefully and completely before starting up your CETONI System:

- QmixElements Software Manual
- Device manuals for all devices in your system
3.7 Separating modules

The individual modules are held together by the two centering pins and by plug and socket of the CETONI system interface. When separating the modules, it is easy to tilt them, which can bend the centering pins and make it difficult to pull the modules apart.

If you want to remove the last module of a system, pull slightly on the rear centering pin of the last module ❶ while holding the module in front of it with the other hand. Pull the rear end of the module on the centering pin away from the previous module until the centering pin of the previous module ❷ is completely visible.

Then pull the front end of the module on the centering pin ❸ away from the system while holding the previous module in line with the other hand.

You may now remove the individual module and reconnect the bus terminating plug (terminator) to the last module of the remaining system.
4 Transport and Storage

Please do not lift or transport the modules while they are plugged into each other. Transport in assembled state is only permissible when using the original packaging.

Use the original packaging for shipping the modules. For the storage of the devices, observe the storage instructions in the corresponding device manuals.

**ATTENTION**. Danger of damaging the device! Never transport modules while they are plugged into each other.
5 Disposal

Please return your old devices to CETONI GmbH which will ensure correct disposal according to the Electrical and Electronic Equipment Act.

Please decontaminate the device if necessary and include the completed Declaration of Decontamination form.
